To access the QR Code pay function of the VenueNext wallet at go to
<https://possandbox-qa.ordernext.com/>

- Click LogIn in the upper right corner, then Sign Up and create an account with your phone number.
- Once logged in, use the hamburger menu in the upper left corner, and select My Wallet
- Once you have created an account, email your Shift4 contact and request Virtual Currency be added to your account for testing. Include the email address you used when creating your account or your phone number.
- Once Virtual Currency has been added to your account, you should see the balance on your wallet page after a refresh.
- For testing purposes you should also add a credit card to your account for testing. To do this go to "Payments". This environment is using a test credit card gateway, so testing can be done by adding a credit card "4111 1111 1111 1111" with any CVV and future expiration date.
- Note the Toggle on the Payments page, this will indicate if the Virtual Currency will be used before charging the stored credit card.

Once you have Virtual Currency and a Stored Credit Card you can validate the configuration by testing the following use cases:

Use Cases

Use Cases to validate during testing:

1. Virtual Currency payment covering full amount
 - a. Steps
 - i. Log in to the OrderNext wallet using an account with Virtual Currency
 - ii. Use QR Code Pay to view the QR code and scan at the POS

- b. Expected Result
 - i. Transaction should tender successfully
- 2. Virtual Currency + Card on File
 - a. Steps
 - i. Log in to the OrderNext wallet using an account with Virtual Currency and a Credit Card saved to the account.
 - ii. Use QR Code Pay to view the QR code and scan at the POS to run a transaction for more than the amount of Virtual Currency
 - b. Expected Result
 - i. Transaction should tender successfully
- 3. Virtual Currency not covering balance - remaining amount tendered at POS
 - a. Steps
 - i. Log in to the OrderNext wallet using an account with Virtual Currency and NO Credit Card saved to the account
 - ii. Use QR Code Pay to view the QR code and scan at the POS to run a transaction for more than the amount of Virtual Currency on the account
 - b. Expected Result
 - i. POS should display remaining amount required to complete the transaction
 - ii. POS should prompt the user to complete the payment process on the POS
 - iii. Transaction should tender successfully
- 4. Card on File only
 - a. Steps
 - i. Log in to the OrderNext wallet with NO Virtual Currency but has a Credit Card on file
