PROGRAM OVERVIEW

Welcome to the Next Technik Partner Enablement Program. This document aims to outline the course details that make up both the individual and partner certification programs required to deploy Next Service.

The certification training is broken down into various streams which form the building blocks for pre-sales, functional consultant, and technical consultant roles within your NetSuite Practice. Participants will need to complete all core units as well as their relevant stream units to become certified.

Training will be delivered via a variety of formats, including video content, live presentations, prerequisite reading material, practical assessments and role playing.

Assessments will be a combination of live demonstrations, assignments, and role play tasks.

About Next Service

Next Service is a certified **Built for Netsuite** Field Service Management (FSM) solution that strives to:

- Enable field service businesses to provide a world-class customer experience (i.e., customer engagement) which leads to increased revenue (repeat business).
- Improve the operational efficiency of field service businesses through efficient workflows and automation (i.e., operational efficiency).
- Provide a highly reliable integration between field operations and finance/inventory data.

Next Service achieves this through its **Next Service Scheduler & Mobile Apps, Next Service scripts, Next Service Configuration** and **supporting workflows and scripts**.

The Next Service Configuration is a JSON object stored in the Next Service Configuration custom record in NetSuite. It allows the product to be configured to the specific needs of the customer. Each customer account has a configuration deployed that aligns the Next Service product to their specific needs and use cases.

Important: Because of the Configuration required to solve customer's requirements, Partners should expect that Functional Consultants and Technical Consultants must work closely together in deploying Next Service.

ROLE PLAYBOOKS

At Next Technik, we use *Role Playbooks* to define the responsibilities, goals, and success measures, for various roles within our company. These are equally important for our certified partners to create alignment between our teams and ensure a smooth delivery.

Partner Functional Consultant Playbook

Functional Consultants act as the primary project manager for delivery of Next Service implementations. They own the customer relationship and are responsible for ensuring work is delivered on time, within budget, and with exceptional customer service.

Goals

- Projects are launched on time (according to the agreed upon milestones) and within budget.
- Positive healthy working relationships are formed with every customer.
- Consultants work harmoniously together to successfully deliver projects.
- A customer's requirements are gathered and intimately understood and used to ensure value is delivered to their business.
- Next Service implementation is coordinated with the NetSuite implementation to ensure the success of both deployments.

Responsibilities

- Commit to an in-depth understanding of the customer's business requirements and provide the best possible solution and experience.
- Follow documented Next Service best practices and guidelines.
- Utilize the support network available to deliver on projects — ask for help when you need it, the best outcome often requires teamwork.

Relationship Management

- Communicate early and often and follow up calls discussing key information with an email summary.
- Make a good first impression and own the customer relationship throughout the deployment phase.
- Set and manage expectations on an ongoing basis — ensure the customer has a solid understanding of the scope and expected timeline.
- Ensure the customer understands what they need to do and by when to ensure the project stays on schedule.
- Communicate to the customer ahead of time when a deadline is not achievable, and what is required to move the deployment back on track.
- It is occasionally necessary to deliver an answer the customer does not want. Rely on your empathy and the relationship you have built to communicate with the customer, and the guidance of team leadership.

Executing Projects

- Set dates for key milestones and coordinate resources to ensure they are met.
- Identify at-risk deployments early, and work with Next Technik Partner Enablement to guide them back on track.

- Prioritize the right projects based on milestones, customer sentiment, and guidance from your team leadership.
- Treat the SOW as the source of truth, refer to it often and always raise a formal variation to scope when the customer's requirements fall out of the original scope.
- Keep your Next Technik Partner Manager up to date on key project milestones and existing or anticipated roadblocks.

Solution Design

- Facilitate workshops with customers throughout the project to gather requirements and validate solutions.
- Brief requirements for your Technical Consultants in clear and concise manner.
- Take accountability for proposed solutions, ensure the customer's requirements are translated and that they are industry and Next Technik best practice.

Partner Technical Consultant Playbook

A Technical Consultant is responsible for implementing Next Service deployments. They work closely with Functional Consultants to technically validate solutions to customer's requirements, and then execute the solution, on time and within budget.

Goals

- Configuration work is completed on time and within budget, allowing for successful deployments.
- You work harmoniously with Functional Consultants to successfully deliver deployments.
- You have a close relationship with other technical resources within your business and within Next Technik Partner Enablement.
- Solutions you implement are simple, elegant, and follow best practice.

Responsibilities

- Implement quality solutions following Next Technik and industry best practices and test every solution thoroughly.
- Utilize the support network available to deliver on projects — ask for help when you need it, the best outcome often requires teamwork.
- Deliver solutions on time and within budget, to the best of your ability.
- Allow efficiency to guide your way of working, and your solutions.
- Prioritize the right projects based on milestones, customer sentiment, and guidance from Functional Consultants and your team leadership.
- Take responsibility for proposed solutions, ensure the customer's requirements are translated and that they are industry and Next Technik best practice.
- Treat the SOW as the source of truth, refer to it often and always raise a formal variation to scope when the customer's requirements fall out of the original scope.
- Ensure the relevant project's Actions Register is updated regularly as you work through tasks.
- Communicate early and often on any issues or potential issues impacting project success.

Partner Solution Consultant Playbook

Solution Consultants are responsible for helping prospects and customers to evaluate Next Service, and the professional services required to deploy Next Service, as a solution for their business.

Goals

- Product demonstrations are valuable and memorable. They focus on the benefits of our product, challenge the broader market, and are tailored to the relevant audience (e.g., *business managers, CIOs, CTOs, CEOs, etc.*).
- *Statements of Work (SOWs)* meet customer's needs.
- Customers have an explicit understanding, documented in writing, of what will and will not be delivered as part of the scope. Any requests that cannot be satisfied are documented.
- Projects do not go over budget due to underexplored requirements. Deployments do not fail due to unexpected additional needs.
- Outcomes are prioritized over outputs, especially when professional services are required. Next Service implementation teams do not build things that customers do not need, and never unnecessarily stretch the capabilities of the product being sold.
- Implementation teams focus on delivering a great outcome to customers, rather than simply giving them every output they ask for.
- Documentation of business requirements, business processes, and any pre-sales interactions with customers (e.g., *meeting notes*) are thorough, air-tight (i.e., *vital information is never omitted*), and accessible (i.e., *easy for customers and internal team to find in the future*).
- Solutioning is not a bottleneck in the sales process. Others in the business find it easy to work with our *Solution Consultants*.

Responsibilities

- Present compelling demonstrations of the Next Service product to prospects.
- Understand and thoroughly document the needs of Next Technik prospects and customers, utilizing best-practice methods and tools (e.g., *needs analysis, Jobs to be Done, journey mapping, user stories*).
- Produce Statements of Work (SOW) that meet the requirements of prospects and customers.
- Produce accurate Estimates for work that is being committed to.
- Help to close deals.
- Assist Next Service implementation teams in the scoping of work.
- Thoroughly document all interactions with prospects and customers throughout the pre-sales process.

Partner Certification Advocate

A Partner Certification Advocate is responsible for advocating Next Service certification from within their NetSuite practice. They are typically a leader in the company, e.g., Professional Services Manager.

Certification Advocates will receive brief training in the Next Service product, what value it provides to users, and where it fits into the overall NetSuite solution. Advocates are not required to attend the training in person and will instead be provided with a pack of materials to assist preparation and advocacy within your NetSuite Practice.

Responsibilities

- Coordinating certification for their company, including:
- Coordinating staff to be certified in the various role tracks.
- Ensuring staff applying to the program are appropriately qualified.
- Working with Next Technik Partner Managers to ensure successful service delivery, including providing feedback to Next Technik.
- Seeking additional stakeholder engagement from within their NetSuite practice.

APPLICATION & ONBOARDING

Partners sending students to the enablement program must have a signed partner agreement in place. If you do not yet have this agreement in place, please contact partnermanagement@nexttechnik.com

Registration

The first step in becoming a certified partner is applying to the program. The relevant application forms are as follows:

- [Training Program - Partner Confirmation](#)
- [Training Program - Consultant Details](#)

You will need to complete a submission for both your NetSuite Practice, and the individual consultants you would like to attend the certification training. We will assess each application on its merits and suitability to the role track. For more information on role playbooks, please review the role playbooks section in this document.

The available role tracks include:

- Functional Consultant
- Technical Consultant
- Solution Consultant

You might also be asked to provide the availability of consultants to ascertain when the next placement will be. While we aim to choose training dates that work for all partners and individuals, we cannot guarantee to satisfy everyone.

Training seats are committed and confirmed per training session on a first-come-first-served basis for Registered and Signed partners via a Registration Confirmation email. If you believe that you have satisfied these two requirements (Registered and signed) but have not received a Registration Confirmation email please reach out to partnermanagement@nexttechnik.com.

Minimum Qualifications

Requirements	
Individuals	• At least 1 year experience in a role matching the applicant's role track. • At least 1 year working in the NetSuite ecosystem. • Actively employed at a Next Technik Partner. • For Technical Consultants, at least 1 year experience in JavaScript, SuiteScript 1.0, and SuiteBuilder • For Functional Consultants, at least one year of project management experience, strong attention to detail and organizational skills • For Solution Consultants, at least 1 year experience of supporting sales efforts with extensive software product knowledge, answering questions and demonstrating software product capabilities.
Companies	• Must be a current Next Technik partner. • Must be a current NetSuite partner.

Onboarding of students

Once a partner has applied, we will notify applicants within one (1) week of submission whether their application has been successful and provide an indication of timing to commence.

The certification program will require a minimum number of attendees from various partners to be effective. Upon satisfying this requirement, we will schedule the next group, endeavoring to fit most applicants. Invitations will be promptly communicated, and we ask for RSVP within two (2) weeks to secure each place.

Systems & Tools

Different tools are used throughout the program and beyond.

Slack and Confluence

As part of your submissions, we will request some information from you to provide access to our Partner Support Instant Messaging Channel (via Slack) and Knowledge Base (via Confluence). These tools are key to communication with consultants and access to our knowledge base.

NetSuite Demo Account

Companies are required to provide at least one (1) demo/tstdrv (test drive) account for the students to use during the three (3) month training cycle. After the Next Service bundle is installed, at least one (1) NetSuite demo/tstdrv account must remain active during the remainder of the three (3) month training cycle. **See Training Policy below for more information on this requirement.*

Companies can set up access to the demo/tstdrv (test drive) account by following instructions below:

1) Provide us with Administrator access to your NetSuite account

Within NetSuite, set up an Employee Record with:

- The name "NextService Consultant"
- Role "Administrator"
- Email address: 1234@nexttechnik.com
- Note: replace "1234" with the account id from NetSuite
- Password "Next\$ervic3"

For security purposes, please set 2FA on the Administrator Role. We use LastPass as the Authenticator.

2) Request installation of the bundle by emailing support@NextTechnik.com, and cc BenG@NextTechnik.com and Aimeec@NextTechnik.com with the following details:

Subject: [your company name] – Next Service Demo Account Provisioning

Body: Please install Next Service into the following demo account:

NetSuite Account Company Name: [your netsuite company name]

NetSuite Account ID: [your netsuite account id]

NextService Consultant Employee email address:

nxadmin+[accountid]@nexttechnik.com

Next Technik requires up to three (3) business days to complete one (1) installation, but often can be completed sooner. Please note if these instructions are not followed it could result in delays in setting up the demo account.

Note: Only Technical Consultants will be given access to the Configuration File. The NextService Employee Access to the account must remain throughout the training and certification period for trainers to properly support the trainees.

CERTIFICATION

Individuals and Companies are required to adhere to the Certification Criteria below to gain and maintain a certification.

Certification Criteria

Requirements	
Individuals	Initial Certification: Must complete and pass the Certification Plan. Ongoing Certification: (1) Must attend two Next Technik webinars and/or events per year. (2) Must complete or work on two Next Service deployments per year.
Companies	Initial Certification: Must have at least one employee for each role track complete and pass the Next Service training course. Ongoing Certification: (1) Must have at least one employee for each role track retain an active certification. (2) Must have the ability and capacity to take on at least two Next Technik referral services per month.

Certification Plan

Training attendees are required to submit materials applicable to their registered role track to receive certification. The materials submitted will be evaluated and approved prior to receiving certification. The submission materials for each role track include:

Functional Consultant

- 1. Training Sessions**
Partner Functional Consultants must attend and complete the online training sessions.
- 2. Confluence Daily Questions and Case Studies**
FC's are provided sets of questions to test their knowledge and understanding from the Partner Training Program and Confluence Pages. Word document files containing the questions must be updated with answers by the FC's.
- 3. Initial Concepts Demo**
FC's are required to record a mock Initial Concepts Demo, and send it to the instructor. More information on this critical requirement can be found on the Partner Functional Consultant Initial Concepts Demo Guidelines page.
- 4. Remaining Use Cases Record Setup**
All additional use cases (not demoed in the ICD submission video) should be set up in NetSuite for review. Setting up these records properly will indicate that the Functional Consultant has a good handle on the Project, Case, and Task Type combinations to ensure they can advise the customer on proper record setup and management.

Technical Consultant

1. **Training Sessions**
Partner Technical Consultants must attend and complete the online training sessions.
2. **Confluence Daily Questions**
TC's are provided sets of questions to test their knowledge and understanding from the Partner Training Program and Confluence Pages. Word document files containing the questions must be updated with answers by the TC's.
3. **Do and Solve Challenges**
Series of Do and Solve activities under the NXPEDS2022T - Do and Solve Practical Introductory and NXPEDI2022T - Do and Solve Practical Intermediate modules are to be accomplished by the TC.

Solution Consultant

1. **Training Sessions**
Partner Functional Consultants must attend and complete the online training sessions.
2. **Prospect Concepts Demo**
SC's are required to record a mock Prospect Demo recording and send it to the instructor.

Maintaining Certification

If Certification Criteria are not met, individuals and companies will receive notifications 2 months prior to certification being lost.

Certification Badge Terms of Use

Badges are provided once the certification criteria have been met. Should your certification elapse, you are required to remove badges within 1 week of notification.

TRAINING

This section details the training plan, format, and policies to follow.

Upcoming Training Dates

Training Session	
September 2023	
November 2023	
January 2024	

Training Plan and Format

The Training will be hosted online using Zoom.

All dates and times are local to the time zone of the training location. Each training day will have 3-hour morning block and a 3-hour afternoon block.

Advanced online sessions may be provided on an optional basis for consultants who pass the certification. Additional sales enablement for Account Executives can be organized remotely.

This training delivery plan is subject to change but provides guidance on the expected format.

Training Policy

Registration Deadline:

Session registration will close when the session is full (See Training Session Size Limit or the registration deadline below, whichever occurs first.

Training Session	Registration Deadline
September 2023	13 Sep 2023
November 2023	27 Oct 2023
January 2024	31 Dec 2023

Training Session Size Limit: All training sessions will consist of a maximum of number of participants per role track. Registrations submitted beyond these size limits will not be accepted.

Role Track	Maximum Number of Students
Functional Consultant	15
Technical Consultant	15
Solutions Consultant	10

Each Company may only enroll a maximum of 5 consultants.

NetSuite Demo Account Minimum: Companies are required to provide at least one (1) demo/tstdrv (test drive) account for the students to use during the three (3) month training cycle. After the Next Service bundle is installed, at least one (1) NetSuite demo/tstdrv account must remain active during the remainder of the three (3) month training cycle. After installation, if one (1) demo/tstdrv account does not remain active with Next Service bundles installed for the remainder of the three (3) month training cycle, this will result in the entire team's automatic removal from the training/certification pool during those months. Companies are permitted more than one installation of the Next Service product into demo/tstdrv (test drive) accounts of their choosing.

The demo/tstdrv accounts should not be refreshed or purged during the entire three (3) month training cycle. If one account is inadvertently purged or deleted, a second account would be a backup account in that scenario. It is highly recommended to request a second installation of Next Service for backup purposes. This will reduce the likelihood of removal from the training cycle due to the product not being available to the company during the three (3) month training cycle.

Requesting Next Service Installation into NetSuite Demo Account: Next Technik can install the product bundle and NXC bundle required for training. Next Technik requires up to three (3) business days to complete one (1) installation, but often can be completed sooner.

Next Service Demo Account Deadline: The NetSuite demo/tstdrv (test drive) account must have the Next Service bundles installed no later than the specified deadline below:

Training Session	NX Bundles Installation Deadline
September 2023	15 Sep 2023
November 2023	3 Nov 2023
January 2024	12 Jan 2023

Confluence Knowledgebase Access: The Next Service Knowledgebase is provided via a single shared login for each partner team. Access to the knowledgebase is only provided at this shared level, it is not provided to each individual. Individuals can login concurrently using the single shared login. The recommended set up for the email address is a group email address that is not a distribution list.

Training Folder: A SharePoint folder to be used throughout the training and certification will be provided to each consultant. The folder will contain all the certification deliverables for the students to fill in. Access will be maintained for one month past achieving certification. If a student is removed from the training session and signed up for a subsequent class, his/her work will not be maintained for the subsequent session. A fresh new folder will be provided.

Training Session Attendance: Students are required to attend all sessions in the schedule. Online Students are required to have web cameras turned on to confirm attendance. Online Students with web cameras turned off will be counted absent.

Students are only permitted **one absence** due to extenuating circumstances (bad weather, illness, etc.). More than one absence will result in the student's automatic removal from the training/certification pool during those months.

Please note this may impact the team's ability to gain certification status. The policy for companies to be certified for Professional Services is the company "must have at least one employee for each role track (Functional Consultant & Technical Consultant) retain an active certification".

Removal of any team member, which results in an insufficient number of Functional Consultant and Technical Consultant roles in the organization, will result in the entire team's automatic removal from the training/certification pool during those months.

Hands-On Exercises: All students are required to have access to Confluence, and the NetSuite demo/tstdrv (test drive) account. Technical Consultant students are required to have access to the Next Service Configuration record in the demo/tstdrv account. All Students will be required to participate in hands-on exercises during the training sessions. Functional Consultant Students will be called upon to demonstrate mock initial concepts demos and demonstrate use cases. Technical Consultant students will be called upon to configure Next Service product features. Students are required to share their screen during hands-on exercises. Students that are unable to participate in hands-on exercises will be counted absent.

Certification Submissions Deadline: Certification practical submissions are required for each student to gain certification.

Training Session	Certification Submissions Deadline
September 2023	31 Oct 2023
November 2023	31 Dec 2023
January 2024	29 Feb 2023

If submissions are not turned in before the deadline, the student will be automatically removed from the training/certification pool during those months. The student will have to re-register for an upcoming training, attend that training session in accordance with the attendance policy above, and turn in submissions the following month.

Certification Submissions Limit: Certification submissions will be limited to three (3) attempts per student. If the student does not pass certification within three (3) attempts, the student will be automatically removed from the training/certification pool during those months. The student will have to re-register for an upcoming training, attend that training session in accordance with the attendance policy above, and turn in submissions to gain certification.

SYLLABUS

The following is a breakdown of the sessions covered and which role track they belong to. Each session is designed to include a balance of presentation material, prerequisite reading or preparation, practical in-session workshops, Questions & Answers(Q&A).

All Consultants

NXPEIN2022A Introduction & Field Service Concepts

Track: FC, TC, SC

Session Outcomes:

- Introductory subject to the course, establishing the outline of the course and definitions of the key components of the course.
 - Understand what our products can achieve for customers.
 - Develop a good understanding of our company, history and why that is important to the Next Service value proposition.
- Understanding what field service management, terminology, and key concepts to the FSM (Field Service Management) industry is

NXPELP2022A Leading Practices

Track: FC, TC, SC

Session Outcomes:

- Develop an understanding of the Next Service best practices for Field Service Management (FSM)
- Review how Next Service leading practices position within the broader NetSuite system and implementation framework including its relationship with the NetSuite Personalisation framework

NXPEAD2023A Next Service Administrative Set Up

Track: FC, TC

Session Outcomes:

- Know the administrative set up needed to be done on Item, Employee Records, and Roles and Permissions to work with Next Service.
- Review instructions for logging in to the Next Service mobile app on a mobile device for both iOS and Android devices.

NXPESI2023A SOW/Optimization Items

Track: FC, TC

Session Outcomes:

- The SOW Items module is to identify how add-ons to scope are identified, quoted, and implemented during or after a deployment. SOW Items ensure that the product is supportable by incorporating approved configuration solutions that follow best practices.
- At the end of this subject, students will have a clear approach on aligning any scope add-on requests with pre-configured solutions to reduce timeline for implementation and to also reduce variation between customer accounts.

Functional Consultants

NXPEEE2022A End to End Flows (In Detail)

Session Outcomes:

- Understand the most common field service use cases end to end in detail.
- Review NetSuite records used to schedule Installation, Breakfix/Repair, Maintenance, & Warranty services.

NXPEICD2023F Initial Concepts Demo Guidelines

Session Outcomes:

- To be certified in Next Service, a Partner FC must pass an evaluation of the Initial Concepts Demo (ICD).
- This session connects all the learnings from the different modules and will be preparatory session for when the Partner FC does his/ her ICD Demo to be evaluated.

Technical Consultants

NXPREE2022A End to End Flows (High-Level)

Session Outcomes:

- Understand the most common field service use cases end to end. Review NetSuite records used to schedule Installation, Breakfix/Repair, Maintenance, & Warranty services.

NXPECF2022T Configuration Foundations

Session Outcomes:

- This unit will enable consultants to grasp the foundational knowledge required to solution for and configure the Next Service product. Starting with the location of documentation and the basic structure of the product consultants will then explore the details of configuration syntax as well as be introduced to key troubleshooting/debugging tools.

NXPEDS2022T Do and Solve Practical Introductory

Session Outcomes:

- This session includes a series of introductory do-and-solve challenges. Each challenge will first be attempted as a group led by the session presenter, then a modified version of the challenge will be provided for participants to attempt individually. The session presenter will be available to assist should anyone become stuck or have questions. Only after each participant has successfully completed the challenge will the group move onto the next challenge.

NXPEBP2022T Technical Best Practices

Session Outcomes:

- This unit will enable consultants to understand the purpose of the Joint Executive Plan (JEP) as you work with your Functional Consultant to achieve outcomes for the customer. Consultants will also gain an awareness of best practices for version control, maintaining code and migration process from Sandbox to Production accounts

NXPEDI2022T Do and Solve Practical Intermediate

Session Outcomes:

- This session includes a series of intermediate do-and-solve challenges. Each challenge will first be attempted as a group led by the session presenter, then a modified version of the challenge will be provided for participants to attempt individually. The session presenter will be available to assist should anyone become stuck or have questions. Only after each participant has successfully completed the challenge will the group move onto the next challenge.

Solution Consultants

NXPEQD2022S Qualification & Discovery

Session Outcomes:

- Understand key qualification criteria and whether a prospect is a good fit (or not)
Be able to run a field service discovery session with a prospect and gather relevant information to build a meaningful demonstration

NXPEBF2022S Demo Day Break-Fix

Session Outcomes:

- Consultants will be able to setup for a demonstration in their own account and be able to create a basic 'break-fix' job
- Understand and be able to demonstrate best use of the Schedule Board and Mobile
- Begin to grasp Asset Management concepts and the complexities around parent-child asset management

NXPEBF2022S Demo Day Installs

Session Outcomes:

- Consultants will be able to setup for a demonstration in their own account and be able to walk through an installation job off the back of a sales order through to the field
- Understand the diverse types of installation work and how these can differ by industry and use of NetSuite Projects

NXPEBF2022S Demo Day Maintenance

Session Outcomes:

- Consultants will be able to setup and demonstrate scheduled maintenance and show the creation of future jobs, and how they interact with the Schedule Board
- Understand and be able to demonstrate maintenance jobs on the mobile, including jobs with multiple assets

NXPESV2022S Selling the Value

Session Outcomes:

- Consultants will be able to articulate key areas of field service value and augment into their Next Service demonstration
- Be able to provide an end-to-end demonstration across the three flows; installs, repairs and maintenance

NXPESA2022S Scoping & Alignment

Session Outcomes:

- Understand how we price implementation packages, what is considered in scope and when additional deliverables need to be added to scope
- Be able to augment field service leading practices into a NetSuite Alignment

POLICIES
