1 Business needs

Power Wholesale Management, Inc. (commercial name: Broadline Cable) is currently developing its SuiteCommerce web store, which sells a wide variety of audio, video, and electronic products. The client is looking to include additional functionality for Product Listing Pages (PLPs) and Product Detail Pages (PDPs), so that clients can easily add items from PLPs and, if logged-in, compare prices.

1.1 Product Listing Pages: display stock available by location only to logged-in customers

Only registered and logged-in SuiteCommerce users must be able to identify the available stock for each location in PLPs.

1.2 Product Listing Pages: Quantity box

SuiteCommerce users must be able to add their desired quantity of an item from the PLP, both by inputting the number in a quantity box and/or using +/- buttons. This feature will be available to all users

1.3 Product Listing Page / Product Detail Page: MSRP – Dealer price

Notes: To be clear, Dealer price on site to us is defined as: Base price unless dealer has a custom price for that item, then “dealer price” would be custom price.

SuiteCommerce must show logged-in customers both their assigned price, labeled as *Dealer Price*, and the *MSRP* price, labeled as such. This applies to both Product Listing Pages and Product Detail Pages.

1.4 Consolidate stores in stock available by location functionality

PLP stock available by location functionality should consolidate stock for Pressley DC and Charlotte stores under Charlotte store.

Yes, this is good. this is only for display on website

2 Acceptance criteria

2.1 Product Listing Pages: display stock available by location only to logged-in customers

- When navigating to a Product Listing Page as an anonymous user, no stock availability is shown for any item.
- When navigating to a Product Listing Page as a logged-in user, stores are listed for each item and display quantity available in each location.

2.2 Product Listing Pages: Quantity box

- When navigating to a Product Listing Page, a quantity box is available next to the Add to Cart and users can input the number of units directly or use the +/- buttons to do so.

2.3 Product Listing Page / Product Detail Page: MSRP – Dealer price

- When navigating to a Product Listing Page and/or Product Detail Page, **anonymous users** should **only** see MSRP price level
- When navigating to a Product Listing Page and/or Product Detail Page, **logged-in users** should see **both** the MSRP price level and their assigned price, labeled as Dealer Price

2.4 Consolidate stores in stock available by location functionality

- When navigating to a Product Listing Page as a logged-in user, only Charlotte and Greenville stores are listed
- When navigating to a Product Listing Page as an anonymous user, no stock per location is listed
- Stock available for any item in Charlotte Store should equal the stock available in Charlotte Store plus stock available in Pressley DC store.

3 Solution proposal

3.1 Product Listing Pages: display stock available by location only to logged-in customers

Will add controls on code to only display stock available by location to reassure only registered users are able to see stock available by location table

3.2 Product Listing Pages: Quantity box

On PLP section, on every PLP item, above add to cart button, 2 new buttons and a quantity box will be added. One button containing '+' to increase the quantity and one button containing '-' to decrease the quantity of the item in question, plus a quantity box to input the number of units directly. Whenever add to cart is pressed, the quantity set will be added to cart.

3.3 Product Listing Page / Product Detail Page: MSRP – Dealer price

In the prices section of every PLP item, a dealer tag and the price next to it will be shown, and MSRP tag and the corresponding price will be shown.

Notes: To be clear, Dealer price on site to us is defined as: Base price unless dealer has a custom price for that item, then "dealer price" would be custom price.

3.4 Consolidate stores in stock available by location functionality

Locations stock available for the item will be returned via script and stock available for charlotte store and Pressley DC store will added and shown as Charlotte on inventory location table

4 Assumptions

- Client is responsible for updating stock availability information by location for all items
- Client is responsible for updating price levels and absolute pricing for all customers

5 Risks

- Adding a quantity box and +/- buttons will affect Product Listing Pages' look and feel, which may be different from out of box functionality.
- Exposing additional information in the web store may impact performance

Oracle + NetSuite Professional Services and Customer agree that the information documented above is accurate and representative of the customer's business needs. This document will act as the basis for all subsequent implementation activities.
