1 Business needs

Revelle Aesthetics is looking for a solution to allow shoppers to create an account online for their teams to review and approve for orders. Before a shopper can be approved Revelle must review the new account, several critical pieces of information are needed, and they have requested we create a new page to contain these fields.

Revelle has confirmed that this page will only be visible to new customers.

2 Impacted areas/modules

This solution will require a creating a new custom page within My Account. This page needs to expose multiple fields from the customer record and allow customers to update the information in those fields.

3 Acceptance criteria

Once a lead is created via the Login screen, the new customer needs the ability to view and update several fields exposed in the Additional Information page. Once the customer has submitted information via this page, it will become hidden. This will be triggered upon submitting this page, and once submitted the page will no longer be visible.

4 Solution proposal

Create a new section within My Account, this will be in addition to the existing Profile page. This new page will contain the following fields and will be called "Additional Fields".

Create a new section exposing the following fields, and including a block where text/instructions can be added:

- *"category" field: allowing customer to view the list and select a new value from that list if needed. (List field)*
- *"thirdpartycarrier" field: allowing customer to view the list and select a new value from that list if needed. (List field)*
- *"thirdpartyacct" field: free form text with same id on customer record.*
- *"custentity_atlas_mfg_std_invoice_email" field: free form text.*
- *2 Checkbox fields, one called Credit Card and the other Invoice. These 2 fields need to be created. If one is checked the other one will be disabled.*
- *1 Checkbox field called Provider Locator. This will map to a box on customer record noting if a customer allows Revelle to call them out on their site.*

- Create and expose 3 new fields:
 - Practice Manager (point Of Contact)
 - Physician
 - Accounts Payable
- These fields are designed to allow a customer to enter the information that will allow Revelle to use the information later to create a new Contact.
- Information that will be on these fields is name/email/phone, and they will be free form-text.
- Explanation: We do not create contacts, we just get the info for example on “practice manager” and we send that into the custom field “practice manager” on the customer record.
- Customer can put multiple emails, names and phone numbers on any of these 3 fields, meaning that there are multiple “Practice Managers”, or “Physicians” or “Accounts Payable”.
- All fields should give the customer the ability to translate the customer facing name via translations. This means each field will have a unique label/value. All updates to these fields will be managed within Configuration Record > Multi-Domain > Translations. For reference:
 - *Case Message* - Message used to create the case that will track the file being processed
 - Go to the **Configuration Record > Multi Domain > Translations** and configure the following keys/entries with the desired verbiage:
 - FILE_UPLOAD_FORM_TITLE
 - FILE_UPLOAD_SUCCESS_MESSAGE
 - FILE_UPLOAD_SECTION_TITLE
 - FILE_UPLOAD_FORM_DESCRIPTION
-
- Add an “Update” button which will save all the info filled up in the customer record fields.
- Add logic to hide this page from customers once the customer has clicked update on this page.

5 Prerequisites

6 Assumptions

- The company/lead record will be created normally on the Register/login page.
- Revelle will be responsible for creating and maintaining their own alerts notifying them of new accounts/accounts being updated.
- If the customer provides incorrect or incomplete information, Revelle will work directly with the customer to gather, the Additional Information page will stay hidden.
- Revelle will be responsible for creating any new contacts required based on the contents of the three new text fields (Practice Manager, Physician, Accounts Payable).

7 Constraints and limitations

- Anything not explicitly called out in this document is considered out of scope and would need another job.
- Use only available SuiteCommerce Extensibility component classes to customize the extensions.

8 Risks

- *These changes could be broken by future updates. Additional work may be needed at that time to correct and fix this custom extension.*
- *If working with SCS and CSS rules are being used to achieve certain behavior then the theme could be updated in the future and the CSS rules might no longer work (although this is highly improbable the risk exists).*

Oracle + NetSuite Professional Services and Customer are in agreement that the information documented above is accurate and representative of the customer's business needs. This document will act as the basis for all subsequent implementation activities.
